PILKINGTON BROTHERS LIMITED · ST HELENS · LANCs

# CATHEDRAL AND FIGURED ROLLED GLASS

## CLASSIFICATION

### NON-FORMAL TEXTURES

PAGE

A rolled glass, one surface of which has a non-formal irregular texture. The irregular surface just gives sufficient obscurity to prevent clear vision through the glass. . . . . 6—17

### SEMI-FORMAL TEXTURES

A rolled glass, on one surface of which a slight semi-formal pattern is impressed. The pattern gives a certain amount of brightness to the appearance of the glass and direct vision through the glass is partially obscured. . . . . 18—23

### FORMAL PATTERNS

A rolled glass, on one surface of which a deep formal pattern is impressed. The pattern gives a high degree of brightness to the glass and direct vision through the glass is almost obscured. 24—41

### DIFFUSION PATTERNS

A rolled glass, on one surface of which a deep non-formal pattern is impressed. The pattern gives a high degree of brightness to the glass and direct vision through the glass is almost completely obscured, with very little loss of light. . . . 44—51

### COMPLETE DIFFUSION AND OBSCURATION PATTERNS

A rolled glass, on one surface of which a deep geometric pattern is impressed. The pattern gives a high degree of brightness to the appearance of the glass and complete obscuration with very little loss of light. . . . . 42—43
